REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

⊙	Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954.
-	No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data).
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

TEXAS - DECEMBER 1954

WEATHER SUMMARY

December was mild and dry. Temperatures averaged above normal and rainfall below normal over all sections of the State. In general, commercial vegetables progressed satisfactorily. Snow and rain on the 28th improved the small grain prospects and revived the wheat prospects over parts of the State but other parts remained in the grip of one of the worst droughts known. Supplemental feeding of livestock increased during the month as the short pastures and ranges became eaten practically to the ground.

Temperatures averaged above normal at practically all stations. The greatest departures of the mean temperatures from normal were over the Panhandle where warm weather prevailed on almost every day from the 1st to the 26th. The first decade was decidedly mild over the extreme west portion. The second decade averaged somewhat cooler over this area. Temperatures over eastern Texas fluctuated considerably but averaged near normal for the first twenty days of December. The Panhandle turned warmer on the 17th with the rest of the State warming on the 20th. The citizens had enjoyed several days of quite mild weather when, late on the 26th, a cold wave from the northwest started across the State. The "norther" moved down state on the 27th and 28th unloading snow and freezing rain over the northern and northwestern counties and lowering the temperatures to the freezing mark or lower almost to the coast. Most stations experienced their coldest temperatures on the 29th or 30th. The lowest was 2° below zero at Plains on the 29th.

There were two precipitation periods during the month. Scattered showers on the 11th and 12th brought amounts ranging from a few sprinkles at numerous stations to several inches at a few. The greatest was 4.39 inches at Henderson in East Texas. This storm brought no amounts of consequence to the extreme west and the area along the Rio Grande. Freezing rains and snow were dumped on several northern and northwestern counties on the 28th and 29th as a norther moved downstate. Ten inches or more snow fell at several stations between Wichita Falls and Lubbock. The greatest amount was 11.5 inches at Munday. The rains from this storm, like those of the one preceding, brought no relief to the extreme west and to the area along the Rio Grande. Several dozen stations in the Rio Grande Valley received no rain during the entire month and many more received only sprinkles too light to measure. Droughty conditions continued in these areas. The areas benefitted most were the Northern Blacklands, the northeastern counties, scattered areas in the southeast, and parts of the Low Rolling Plains and Cross Timbers. Early in December, a fast-moving cold front accompanied by strong winds set off the first wide-spread dust storm of the season. The storm moved southward and eastward covering much of the State. Farmers "chiseled" their fields to prevent the loss of their soil. The blowing dirt beat the growing wheat and the dry winds sapped the moisture from the soil. More dust storms plagued the northwest during the third week and a haze of dust drifted southward to the Gulf.

Wheat and small grain prospects improved or deteriorated according to whether the area concerned received rains and snow or only dust storms. The heavy snows in the vicinity of Vernon and Quanah brought particular benefit to wheat growers. Much more moisture is needed in other wheat-growing areas, however, to pull the dryland wheat through the winter. Commercial vegetables made satisfactory progress through most of the month. The sub-freezing temperatures on two days near the last of December slowed the growth of some crops but in general, the hardy type vegetables were in good condition in all the growing areas. Supplemental feeding of livestock increased during the month as the hay reserves became short and the short pastures and ranges became eaten practically to the ground. The freezing rains and snows with chilling winds on the 28th forced livestock to hunt shelter as the wet norther crossed the State.

Lucius W. Dye

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

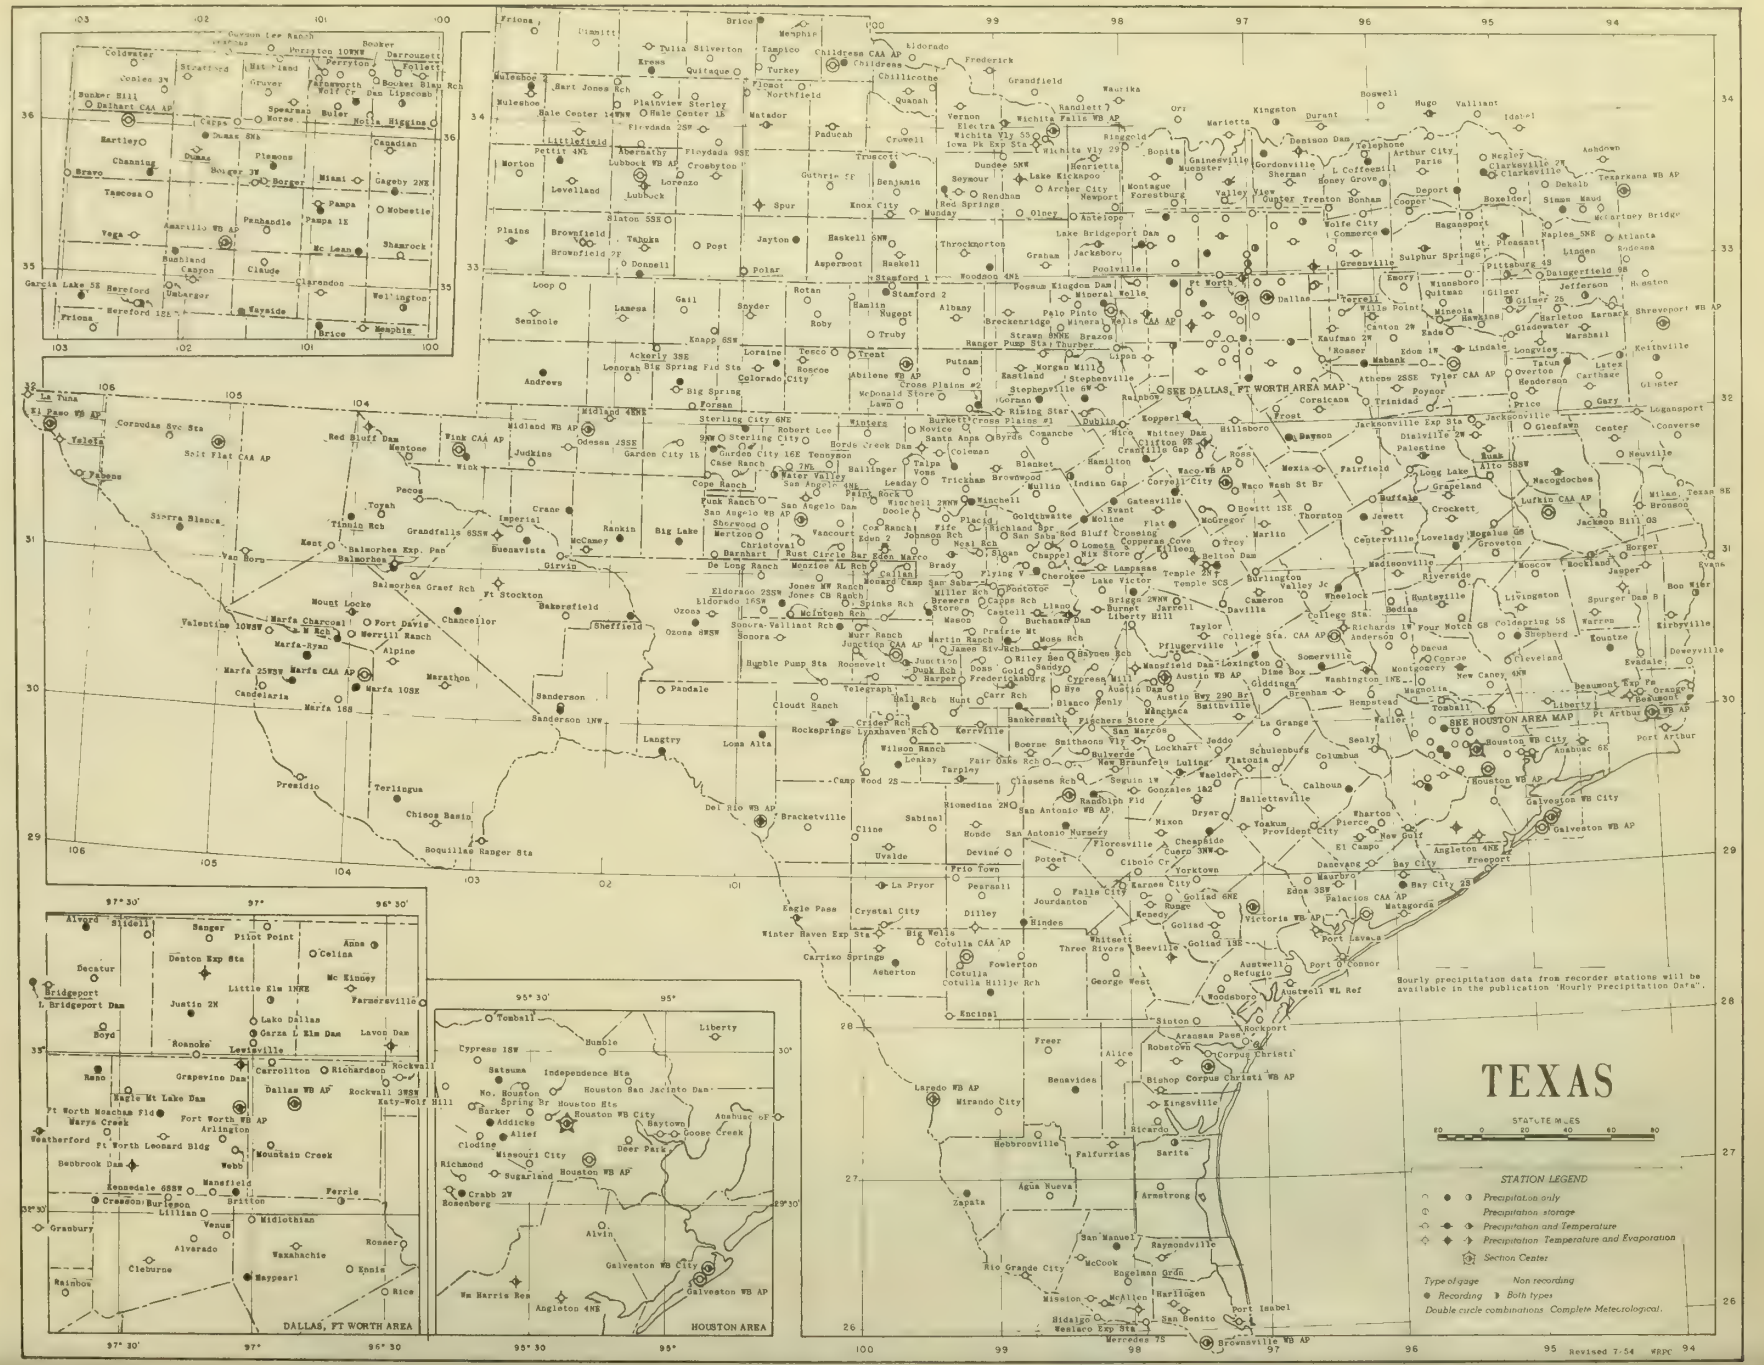
Additional information regarding the climate of Texas may be obtained by writing to any Weather Bureau Office or to the State Climatologist at Weather Bureau Office, Box 4089, Houston 14, Texas.

@	Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954.
-	No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
'	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data).
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

NWRC, Asheville, N. C. --- 2-24-55 -- 1655

CORRECTIONS



January 1952: Liberty, Table 2, total precipitation should be 1.84, departure from normal -2.17 and no. of days with .01 or more 7.

Liberty, Table 3, 31st should be .10 and total 1.84.

Annual 1952: Liberty, Table 2, total precipitation should be 49.84 and departure from normal -1.31.

August 1954: Spur, Table 6, total evaporation should be 9.31B.

November 1954: Uvalde, Table 2, delete degree days.

ANNUAL SUMMARY 1954

Volume LIX No. 13

ASHEVILLE: 1955

TEXAS - 1954

WEATHER SUMMARY

1954 was warm and dry. Temperatures averaged 67.4 degrees or 2.1 degrees above normal. Rainfall averaged 18.30 inches or about two-thirds of normal. Production of cotton, oats, barley, rye, rice, sorghum grain and silage, alfalfa seed, and hairy vetch seed was above average. Production of deciduous fruits, peanuts, flaxseed, and sweet potatoes was very short.

Temperatures for the year averaged 67.4 degrees. In the 67 years of record for Texas, higher averages occurred in only five years: 1910, 1911, 1927, 1933, and 1934. In 1954, only March and May temperatures averaged below normal. Several months were especially warm. February temperatures averaged 56.5 degrees or 6.0 degrees above normal. Higher February averages occurred in only three years: 1925, 1930, and 1932. April temperatures averaged 69.7 degrees or only 0.9 degree lower than the warmest April of record. July temperatures averaged 85.4 degrees. The only warmer July of record was in 1934 when the temperatures for the month averaged 85.5 degrees. In general, temperatures averaged 70.0 degrees or higher over the area south of a line from Port Arthur to Austin to Del Rio and lower than 70 degrees north of that line. Temperatures averaged lower than 65 degrees over the Panhandle and the western part of the Trans-Pecos. The lowest annual mean temperature was 57.9 degrees at Mt. Locke; the highest, 76.1 degrees, at San Benito. Most stations registered their warmest temperatures in July and their coldest in January or December. The absolute temperature range for the year was from 4 degrees below zero at Littlefield on January 21st to 114 degrees at Palestine on July 25th and at Boquillas Ranger Station on July 27th. Temperatures averaged above normal at practically all stations. Over the Panhandle and over much of north central Texas, temperatures averaged over two degrees above normal.

1954 was a drought year. It was the fifth successive year with less than normal rainfall. Precipitation for 1954 averaged 18.30 inches or 9.40 inches less than the normal. The only year of record with less rainfall was 1917 when the average was 16.21 inches. Precipitation averaged above normal in April, May, and October of 1954 and below normal in each of the other months. February was one of the especially dry months. Rainfall averaged 0.31 inch or only 20% of the normal. The only February of record with less rainfall was 1916 with 0.09 inch. The March 1954 average of 0.41 inch set a new low record for that month. The September average of 1.01 inches is less than the average for any September of record except 1931, 1939, and 1947. In general, rainfall west of a line from Wichita Falls to Palacios was less than 20 inches for the year and rainfall over the area east of that line exceeded 20 inches. Most of the western half of the State received less than 15 inches during the year. A few stations in the extreme west received less than ten inches. The least amount was 4.67 inches at Fabens. A few stations in the extreme east and in the extreme northeast received over 35 inches. The greatest annual total was 45.96 inches at Marshall. A few stations along the lower Rio Grande received several inches more than normal rainfall during the year. A few isolated stations in the extreme northeast and in the Panhandle also received more than normal precipitation during the year. Rainfall over the rest of Texas was below normal. A large area extending from Junction and Waco southeastward to the Gulf of Mexico received 15 inches less than normal. The rainfall at Austin for the year amounted to 11.42 inches or less than one-third of the normal for Austin. The total for Galveston Airport was 20.98 inches, 27.00 inches less than normal.

The 1954 crop season was one of drought and doubt. The final outcome was never certain until the harvest was complete. There were two periods, one in early December 1953, the other in May 1954, when surface moisture was adequate over most of the State. Previously exhausted subsoil moisture, particularly in the northwest, was spotty and not fully replenished. Reserve moisture was not available upon which the growing crops could draw when the June, July, and August temperatures approached or went above 100 degrees day after day. Recurring spring frosts and freezes nearly wiped out the plum, peach, and pear crops. Some cotton was nipped and had to be replanted. Spring planted crops over the eastern two-thirds of the State got off to a slow start because moisture was lacking for germination and early growth. April showers followed by heavier rains in some areas brightened the outlook temporarily but the high temperatures of summer combined with the lack of rain during this critical period sharply reduced the crop prospects. Irrigated crops did not suffer so much as the dry-land crops. Almost ideal weather conditions prevailed during the harvest season and the yields exceeded the growers expectations with the result that the production of cotton, oats, barley, rye, rice, sorghum grain and silage, alfalfa seed, and hairy vetch seed was above average. Production of hay and forage was less than average and some peanut yields were too light to warrant threshing.

STORMS

Severe storms occurred in every month from February to October. Storms were especially numerous and severe from April to July. For details the reader is referred to the monthly issues of Climatological Data, Texas Section, and to Climatological Data, National Summary.

Lucius W. Dye

FLOOD OF JUNE 26-28, 1954

The flood of June 26-28, 1954, was the greatest of Rio Grande written history. Excessive rains fell over the lower Pecos River valley and adjoining areas to the east on the night of June 26 and morning of June 27. Supplemental precipitation data are tabulated on Page 135 of the June issue of Climatological Data, Texas Section. The main rain source was in the Langtry-Sheffield-Ozona area, where as high as 27.10 inches of rain occurred in 48 hours near Pandale. Flash floods in normally dry arroyos washed out highway and railway bridges and fills. The Sunset Limited on the Southern Pacific was stranded with about 266 passengers at Langtry. Some of the passengers were evacuated by helicopter. About 200 automobiles were also stranded at that point. The highway bridge over the Pecos River was washed out. Some damage occurred in the city limits of Del Rio and Eagle Pass but the major damage was in Laredo. Practically all deaths and the extreme damage to property were on the Mexican side of the River. Flooding also occurred along the Nueces River. Only minor damage occurred on the Nueces as most of the territory flooded was ranch country.

REFERENCE NOTES

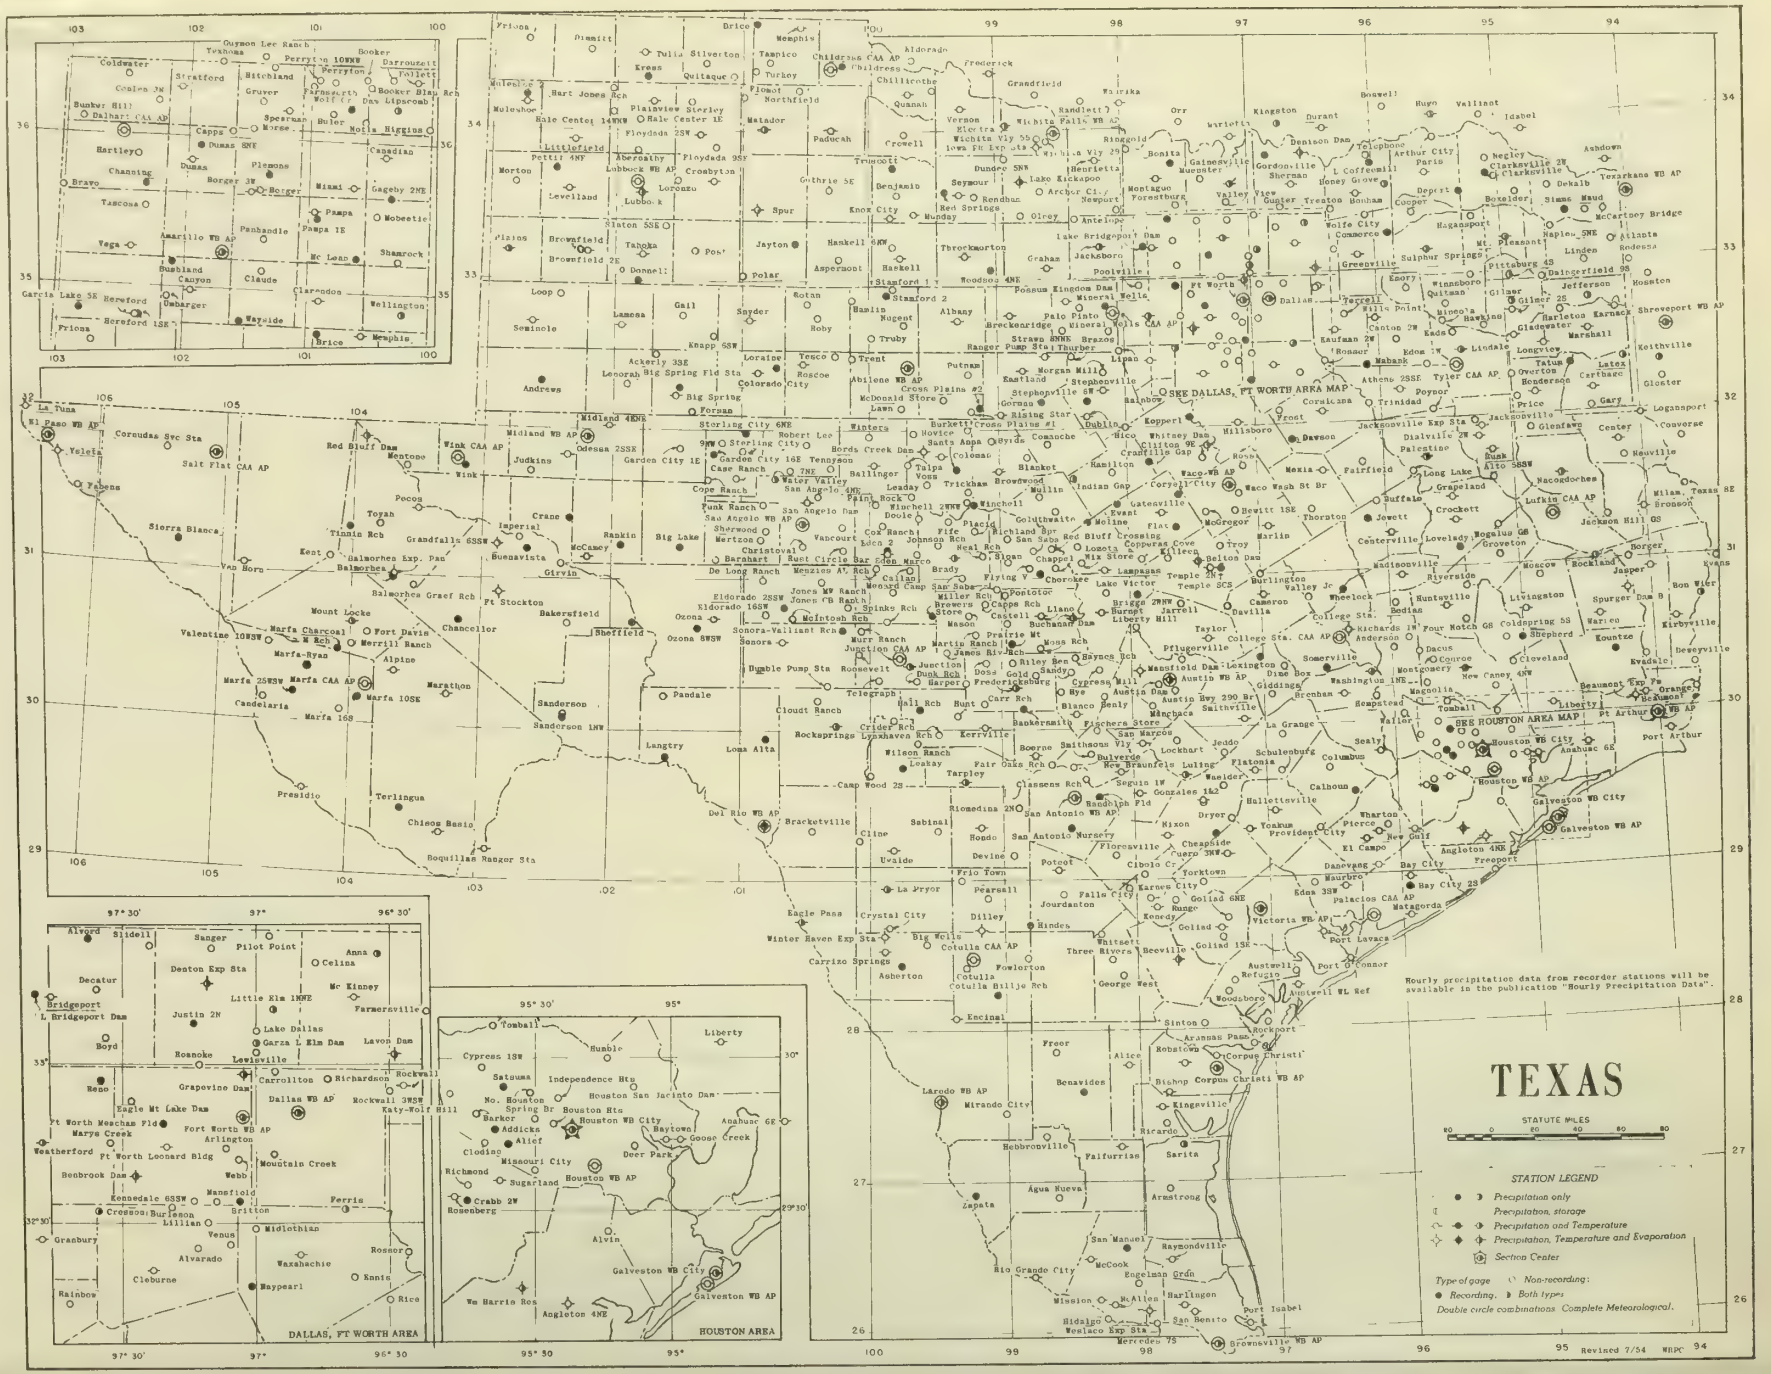
Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.



Data for recorder stations denoted by "C" are processed for special purposes and published in "Hourly Precipitation Data". Length of record for recorder-only stations may be found in the annual issue of "Hourly Precipitation Data".

Additional information regarding the climate of Texas may be obtained by writing to any Weather Bureau Office or to the State Climatologist at Weather Bureau Office, Box 4089, Houston 14, Texas.

- \- No record.
- \+ Also later date (dates) or months.
- * Amount included in following measurement.
- // Gage is equipped with a windshield.
- B Adjusted to full month.
- E Amount is wholly or partially estimated.
- M Less than a complete month of record available; if average value is entered, less than 10 days of record are missing; see monthly Climatological Data for detailed daily record.
- R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
- T Trace, an amount too small to measure.
- V Includes total for previous month.

Subscription Price: 20 cents per copy; monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

ASHEVILLE: 1955

TEXAS - JANUARY 1955

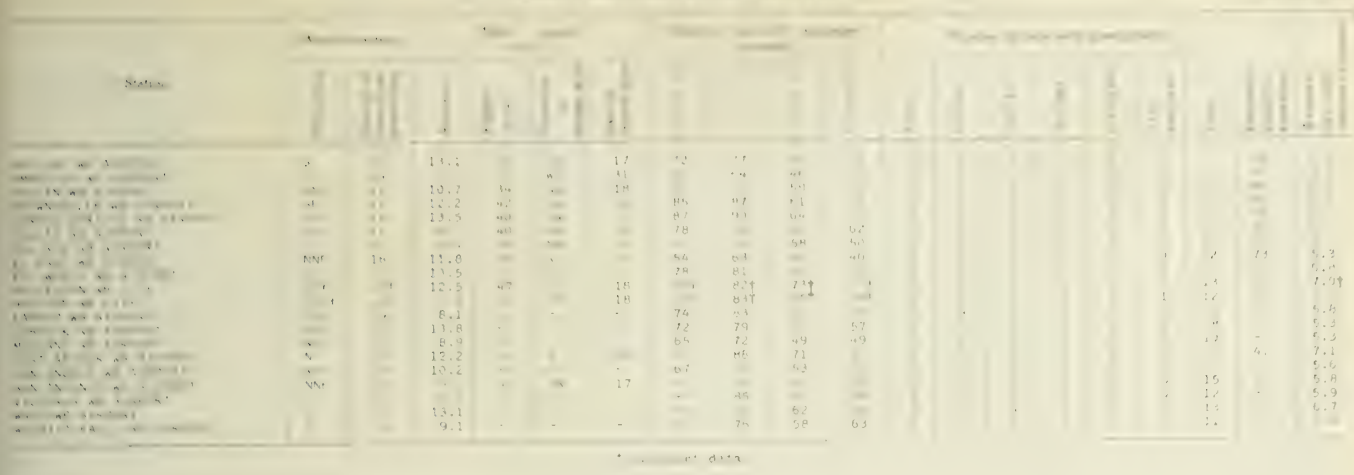
WEATHER SUMMARY

Temperatures averaged exactly normal with rainfall slightly below normal. Snowfall averaged about two inches over the northwestern and extreme western divisions and a half inch over the north central division. The rains and melted snow furnished needed moisture for crops and pastures but more moisture was needed over some areas. Heavy frosts and low temperatures during the latter part of the month caused light widely scattered damage in the Lower Rio Grand Valley.

The first five days and the last two days of January were warm and all stations registered their highest temperatures on one or more of those days. From the 6th to 29th, temperatures fluctuated from a few degrees above normal to several degrees below normal One particularly chilly spell lasted from the 19th to 24th. Another from the 27th to 29th affected most of Texas but not the Panhandle where temperatures remained a few degrees above normal. A cold front moved across the State on the 26th followed by several days of chilly weather, Minimum temperatures of near freezing or lower and heavy frosts were common as far south as the Lower Rio Grand Valley on the mornings of the 24th and 25th. A series of cold fronts from the 24th to 29th kept temperatures low until the last two days of the month.

Precipitation averaged 97 per cent of normal. Most stations over northwestern Texas received slightly more than their January normals. Above-normal rain amounts also occurred over a narrow irregular area from Cotula northward to Junction and from Junction northeastward to Nacogdoches and over an area from Port Lavaca to Port Arthur and extending inland about sixty miles. Other parts of Texas received slightly less than normal rainfall. Several stations reported no rain during the month. In general, the amounts ranged from less than one-tenth inch over the extreme northwestern part of the Panhandle to over four inches along the Upper Coast. The vicinity of Port Arthur received over six inches and the greatest amount, 9.05 inches, occurred at Evadale. During the first decade, rains of a half inch or more occurred over the High Plains from Amarillo southward and from Abilene to Uvalde and eastward. Snows occurred over the western Cross Timbers, the Low Rolling Plains, the Southern High Plains, and over parts of the Trans-Pecos. Additional rain, snow, and light drizzle occurred over parts of the State during the next week with a few heavy local showers over some central and southeastern counties. A few rains of local character occurred after the 18th.

Farm work accelerated during the mild weather of the first few days of January but still lagged. Some plowing was accomplished but most of the activity centered around the care of livestock, repairing fences, burning brush, and terracing. Some soils were too dry to work. Rain and drizzle during the second and the first part of the third week held field work at a standstill but the additional moisture and mild temperatures stimulated the clovers, grains, and grasses. Cool weather during the last half of the month caused continued delay of field work and limited farm activities mostly to routine chores and the care of livestock. At the end of the month, cotton planting had begun in the Lower Rio Grand Valley and much land in the Coastal Bend and Upper Coastal counties was being prepared for planting.



Dryland wheat in the Northern High Plains deteriorated throughout the month because of lack of rain. Many plants died and those remaining were in poor condition and needed moisture to survive. Wheat and small grains on the Low Rolling Plains and eastward responded to the rains but were retarded by the cool temperatures of the latter part of the month. Strong winds during the last week took much urgently needed surface moisture in the Southern Low Rolling Plains. Winter legumes and small grains in east Texas and along the Upper Coast continued fair to the end of the month. During the closing week, some oats and barley planting was under way in the Low Rolling Plains and the northern Blacklands.

Snow cover over the High Plains, the Low Rolling Plains, Cross Timbers, and parts of Trans-Pecos, had forced the livestock out of the fields and heavy supplemental feeding was required to maintain the stock in fair condition. Cattle were thin in eastern Texas and along the Upper Coast but showed some gains with improved supplies of green pastures. Ranchers over much of the State continued to feed cake and roughage where low temperatures checked the growth of clovers and winter grasses. Marketing of cattle and calves was heavy in the central and southern counties but eased during the third week as the feed outlook improved. As the month ended, wheat, oats, and barley were furnishing some grazing along the Red River from Wichita Falls eastward but very little elsewhere.

Commercial vegetables in non-irrigated areas were making some growth but needed moisture. The heavy frosts on the morning of the 24th and 25th killed watermelons at Falfurrias but damage to tender vegetables in the Lower Rio Grand Valley was light and widely scattered. Citrus and hardy vegetables escaped damage.

Lucius W. Dye

STATION INDEX

Station	Index No	County	Drainage	Latitude	Longitude	Elevation	Observation time	Temp	Precip	Observer	Refer to tables
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Additional information regarding the climate of Texas may be obtained by writing to any Weather Bureau Office or to the State Climatologist at Weather Bureau Office, Box 4089, Houston 14, Texas.

Φ	Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954.
-	No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AM	Data based on observational day ending before noon.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data).
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

TEXAS - FEBRUARY 1955

WEATHER SUMMARY

Temperatures at most stations averaged slightly below normal. Rainfall was above normal over most of the southeast part of the State and below normal over the northwest. Field work was interrupted by rains and cold spells but resumed again during the fine weather periods. Supplemental feeding of livestock continued in the west where pastures remained practically bare.

The first day of February was seasonably mild. Slightly cooler air moved into the State on the 2d and warmer air returned on the 8th. A cold front moved across the State on the 9th and 10th followed by a dry norther that brought sub-freezing temperatures to most of the State on the 11th and 12th. The 13th to 18th were warmer than normal but another norther moved across Texas on the 18th followed by cooler weather for the period 19th to 24th. The last few days were seasonably mild. Most stations registered their coldest temperatures on the 11th or 12th and their warmest temperatures during the last few days of the month. The absolute temperature range for the month was from 1° below zero at Stratford on the 20th and 21st to 95° above zero at Boquillas Ranger Station on the 26th. The mean temperature for the State was 49.4° or 1.1° below normal.

There were two rainy periods during the month--soaking rains from the 3d to the 6th and showers, sleet and freezing rains on the 19th to 21st. Eastern Texas benefitted from both rainy periods with little or no rain falling over western Texas and over the extreme south. In general the area north of a line from Port Arthur to Austin and east of a line from Austin to Texarkana received over four inches of rain during the month. Totals exceeded six inches over some counties. The greatest amount was 10.24 inches at Bon Wier. Numerous stations in the Trans-Pecos, High Plains, and Edwards Plateau received no rain during February. Most stations north and west from a line from Del Rio to Ft. Worth received less than normal rainfall amounts with greater than normal totals southeast of that line. Several counties from Corpus Christi to Brownsville received less than normal precipitaiion during the month. Soaking rains during the first week over the part of the State east of a line from Ft. Worth through Del Rio and north of a line through Laredo and Corpus Christi brightened the 1955 crop prospects. The slow rains continued for several days with little run-off, breaking the drought and partially replenishing the sub-soil moisture. Soils in some southeastern counties were near saturation. The rains did not cover the Trans Pecos and extreme southern counties. As the soils dried, farm activity accelerated until a dry norther roared downstate on the 10th followed by sub-freezing temperatures over most of the State on the 11th and 12th. Temperatures near or below freezing spread over the Lower Valley on the morning of the 12th causing minor damage to hardy vegetables and light to heavy damage to tender vegetables. Strong dry winds during the second week dissipated the much needed moisture in the Low Plains, Cross Timbers, Blacklands and southward but the soils remained too wet for field work, in parts of east Texas. Field work increased during the warm days from the 14th to 18th but stopped as another norther swept across the State on the 19th raising clouds of dust but bringing little rain over the Plains but light to moderate showers, freezing rain, and sleet eastward of a line from Ft. Worth, San Antonio, and Corpus Christi. Field work started again during the last few days of the month as the temperatures warmed and the fields dried.

All south Texas commercial vegetables made reasonably good progress in overcoming the effects of the frosts and low temperatures of February 12th. At the end of February, lettuce still showed the effects of the freeze and were in limited supply but cantaloupes, sweet corn, and especially tomatoes made good recovery. Beets, carrots, and cabbage were in good supply.

Winter grasses, weeds, and small grain pastures over the eastern two thirds of Texas responded to the February rains but were checked by the northers that crossed the State on the 10th and 19th. Livestock shrinkage was heavy in the northwest in spite of increased supplemental feeding of cake and roughage during the extremely cold weather. Pastures over the eastern half of the State responded with renewed growth to the warm temperatures during the last few days of February. Clover bloat increased. The short winter weeds and grass furnished some sheep feed over the eastern plateau but more rains were needed to produce cattle feed in that area. Pastures over the western half of the State were practically bare and heavy supplemental feeding continued.

FLOODS

Heavy rains, ranging from four to eight inches, fell over the upper portions of watersheds of the Lavaca and Navidad Rivers on the 4th and 5th, causing slight flooding at Edna and Genado. Damage was slight as grazing lands were flooded. Excessive rains fell over the Trinity Basin below Long Lake on the 3d to 7th causing minor flooding at Liberty. No damage was reported.

Lucius W. Dye

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Additional information regarding the climate of Texas may be obtained by writing to any Weather Bureau Office or to the State Climatologist at Weather Bureau Office, Box 4089, Houston 14, Texas.

Ⓞ	Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954.
-	No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AM	Data based on observational day ending before noon.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data).
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Volume LX No. 3

ASHEVILLE: 1955

TEXAS - MARCH 1955

WEATHER SUMMARY

Temperatures averaged 59.0° or 1.4° above normal. Rainfall averaged 0.80 inch or 45 per cent of normal. The outstanding features of the March weather were the two northers that moved downstate on the 20th and 25th bringing freezing temperatures to all areas except the immediate Gulf coast and extreme southern part of Texas, and causing widespread damage to gardens, fruit, and field crops.

Temperatures at the beginning of the month averaged about 10° above normal. A three-day cool spell interrupted the warm weather near the end of the first week but warmer weather persisted from the 9th to the 15th and, in some areas, to the 20th. The 10th to 12th was especially mild with temperatures at some stations averaging 20° or more above normal on one or more of those days. Two cold fronts moved across the State on the 20th and 25th followed by record-breaking low temperatures. Temperatures at some stations plunged 30° below normal on the 26th. The northers advanced far southward bringing freezing temperatures to Port Arthur and Port O'Connor. Minimums on the 26th reached 33° at Galveston, 34° at Corpus Christi, and 39° at Brownsville. Temperatures returned to near normal at the close of the month. The absolute temperature range was from 4° at Mt. Locke on the 26th to 100° at Encinal on the 11th and 20th and at Llano on the 11th. Temperatures lower than 4° are not unusual in March. It is unusual that such low temperatures should occur so late in the month.

A few light showers fell along the coast on the 7th to 9th. Light to generous rains fell over large areas from the 18th to 21st. The greatest daily amount was 4.07 at Gladewater during the 24-hour period ending at 8:00 a.m., the 21st. Some widely scattered showers were recorded on the last day of the month. Precipitation was very poorly distributed over the State. Numerous stations received no rain during the month. In general, the areas within about one hundred miles from the Gulf and the western half of the State received less than a half inch. A large section in the northeast part of the State received over two inches, several counties in the extreme northeast received over three inches; a few, over four inches. The greatest monthly total was 5.97 inches at Quitman. A few stations in the extreme northeast, a few in the Waco area, and a strip from Midland northeastward to Quannah and Vernon received more than normal amounts. Almost all other stations received less than normal amounts. Many stations in the southeast, from Victoria to Houston to Lufkin lacked two inches or more of receiving norman rainfall during March. A few in the Port Arthur area lacked between three and four inches.

Tractors rolled over the eastern third of the State during the warm open weather of the first three weeks. Seed beds were prepared and the early row crops planted. The unusually warm weather speeded germination and cultivation progressed rapidly. Wheat on the high plains suffered from a combination of drought, high temperatures, and wind. Field work was active in practically all commerical vegetable areas. Clovers, rescue grass, and small grains made lush growth over the eastern third of the State and livestock in that area made good gains. In western and south Texas, supplemental feeding of livestock continued because lack of moisture retarded the growth of the grass. Two cold fronts moved across the State on the 20th and 25th, followed by high winds and record low temperatures for so late in the season. Minimum temperatures were under 10° in the Panhandle, in the low 20's in the hill country and east Texas, 30° at Houston, 32° at Victoria, and 34° at Corpus Christi. Little rain occurred; the winds were accompanied by dust. Hard freezes over most of the State practically wiped out peach, pear and plum prospects, ruined spring gardens, caused heavy loss of late spring tomato plants, and made it necessary to replant considerable acreage of corn, cotton, sorghums, watermelons, and other spring planted crops. The Lower Valley and Falfurrias watermelon areas escaped freeze damage.

The Lower Valley and Coastal Bend vegetable areas escaped freezing temperatures but the cold winds delayed production. The drought, intensified by the high winds, left little hope for dryland wheat on the High Plains. Livestock remained in fair to good condition. Supplemental feeding continued in the western part of the State as the pastures and ranges remained dry. Hard freezes and cold winds retarded the growth of spring grass and weeds.

Lucius W. Dye

LOCAL STORMS

Numerous storms were reported on the 20th: tornadoes occurred at Montague, Bonita, Nocona (Montague County) with property damage of $35,000 and one person injured; one at Killeen, Bell County, which upset trailers, and injured a small girl; one at Nixon, Gonzales County, property damage, $15,000; one at Blooming Grove, Navarro County, property damage, $1,000; one at Waskom, Harrison County, damage of $6,200 (this storm moved into Louisiana); destructive windstorms occurred at Gainesville, Cooke, County, damage $1,000; Uvalde, Uvalde County, damage $2,000, a circus tent collasped on 400 to 500 persons, mostly children, but no injuries fortunately occurred; San Antonio, Bexar County, damage $100,000, gusts as high as 63 m.p.h. at the Airport Tatum, Rusk County, damage $5,000; hail at Waco, McLennan County, with stones from 1 to 1-1/2 inch in diameter damaged crops $1,000; lightning struck a home near Tyler, Smith County, on Greenbriar Lake, which resulted in a fire with loss between $50,000 and $100,000.

Three storms were reported on the 21st: (1) a dust devil at Calallen, Nueces County picked up part of the roof of a huge chicken house and carried it about 100 yards, damage $10,000 to $11,000; (2) a wind storm at Lake Jackson, Brazoria County uprooted trees, one of which crashed into the living room of a home, damage $3,000; and (3) a suspected tornado destroyed a barn 4 miles north of Temple, Bell County and also wrecked a brooder house, damage $3,000. On the 26th, gusts of wind 51 m.p.h. ripped the canvas of an aluminum frame tent of the General Motors Parade of Progress, damage $1,000, at Waco, McLennan County, which halted the exhibit.

Numerous storms occurred on the 31st: at Wichita Falls a windstorm damaged the outdoor screen of a drive-in theater, $10,000; at Gainesville a suspected tornado left heavy damage to farm buildings, homes, and equipment; at Lake Dallas, Denton County a boat capsized, and one person was believed to have drowned; at Dallas a wind and hail storm blew down trees and power lines, which disrupted evening traffic, and property damage amounted to $50,000; at Waco a funnel cloud was observed, which broke up without touching the ground near Taylor, Williamson County, at Rice's Crossing, a wind storm injured a 17 year old boy with flying debris; at Columbus, Colorado County hail with stones reported as large as golf balls covered the ground, crop damage $5,000, property damage $10,000; and at Edna, Jackson County hail caused severe roof and glass damage, more than 100 roofs damaged, 70 window panes were broken in the school gymnasium, crop damage $50,000, property damage $45,000. Many minor storms were reported also during the month.

C. B. Crooker

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Additional information regarding the climate of Texas may be obtained by writing to any Weather Bureau Office or to the State Climatologist at Weather Bureau Office, Box 4089, Houston 14, Texas.

Ø	Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954.
-	No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AM	Data based on observational day ending before noon.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data).
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

TEXAS

APRIL 1955
Volume LX No. 4

ASHEVILLE: 1955

TEXAS - APRIL 1955

WEATHER SUMMARY

April was comparatively mild. Temperatures over much of the State averaged several degrees above normal. Rainfall was abundant over most of East Texas but, in general, less than normal elsewhere. Drought continued to plague the High Plains and wheat prospects dwindled until the shortest crop in thirty years was indicated.

Temperatures the first two weeks averaged near normal. The eastern part of the State experienced a few mild days during the first week and several relatively cool days the second week. Temperatures during the last half of the month were mostly above normal over the entire State. Monthly mean temperatures at practically all stations were more than two degrees above normal. The exceptions were in the extreme western part of the State and in the extreme east. Temperatures over most of central Texas averaged more than four degrees above normal. The average for the entire State, 68.9°, was 3.7° above normal. The absolute range was from 22° at several stations to 109° at Rio Grande City.

Although light showers occurred on many days, the amounts were small and ineffective over much of the State. Many stations in the western and southern parts of the State received no rain during the month. In general, the High Plains, Low Rolling Plains, Trans-Pecos, Edwards Plateau, Southern Texas, Coastal Bend and Lower Valley received less than an inch. At the other extreme, parts of East Texas received over four inches. The greatest amount was 9.13 inches at Kirbyville.

Blowing dust reduced visibility in the Panhandle to one-fourth mile on the 2d and 3d. A major duststorm moved downstate on the 22d to 24th.

The continued drought caused complete abandonment of some wheat acreage in the High Plains. Many acres were plowed under during the last week of April. Surviving irrigated wheat in the High Plains improved. Wheat prospects declined in the Low Rolling Plains. Dry weather also reduced prospective yields of rye. Prospects remained good for irrigated cotton in the Lower Valley but lack of rains retarded dryland cotton in South Texas. Replanted corn and sorghums in central, northern, and eastern areas were being cultivated for the first time. Pastures and hay were below average in the dry areas. Rescue grass and clovers were providing surplus pasture feed over the eastern third of the State. Cattle and calves in the Blacklands, East Texas, and along the Upper Coast made good gains. In the west, northwest, and south, the condition of cattle depended on the amount of hay and cake rationed out and many were thin. Ewes, lambs, and yearlings over much of the main sheep country were in poor flesh except where they had received substantial supplemental feed. Production of spring-crop vegetables was estimated to be ten percent above average although ten days to two weeks later than usual.

Lucius W. Dye

STORMS

On the 5th, five severe storms occurred in which damage exceeded $1,500,000 and 6 persons were injured: (1) a tornado accompanied by high wind and hail extended from Stamford, Jones County, to Woodson, Throckmorton County, leaving 6 injuries and damage of $1,000,000; 700 homes were damaged in Stamford and 152 homes were damaged in Throckmorton County; (2) a tornado at Henrietta, Clay County, damaged two barns to the extent of $1,500; (3) a hailstorm at Graham left damage amounting to $10,000; (4) a hailstorm at West, McLennan County, extended from Aquilla to Hubbard, and left damage amounting to $500,000; (5) a windstorm at Bowie, Montague County, damaged several buildings and broke plate glass windows; the amount of the damage was not estimated.

On the 6th, severe storms were reported along the Red River from Wichita County eastward to Cass County, which killed 1 person, injured 54, and left damage exceeding $3,000,000: (1) tornadoes occurred at Collinsville, from Sherman To Dodd City (including Bonham), from Antelope to Newport, near Wichita Falls, from Era to near Gainesville, from Sanger to Van Alstyne, at Linden, and from Sulphur Bluff to Hagansport; (2) hail accompanied the tornadoes at Sherman, Antelope, and Sulphur Bluff, and hail was reported as the worst ever experienced at Wichita Falls; hail also damaged 75 homes at Mt. Pleasant, Titus County; (3) a windstorm at Muenster, Cooke County, did damage amounting to $800. The Sherman and Bonham storm was most severe with 1 killed, 44 injured, crop damage of $100,000 and property damage amounting to $2,750,000. Seven homes were destroyed, 309 homes damaged, 14 other buildings destroyed, and 54 other buildings damaged in Grayson County alone according to a Red Cross survey.

On the 10th, lightning struck several oil storage tanks near Thomaston, DeWitt County, leaving damage estimated at $20,000.

On the 12th, a hailstorm damaged about 1,000 homes in Dublin with damages amounting to $300,000. A tornado at Frankston, Anderson County, injured 7 persons and caused damage of $80,000. Also minor storms were reported on the 12th from Dime Box, Latexo, Rusk, Trent, and Hearne.

On the 18th, a suspected tornado destroyed an empty house and damaged other buildings at Kenton, Wheeler County, with damage of $7,000.

On the 20th, a hail and wind storm from China Spring to Buffalo brought damage to McLennan, Limestone, Freestone and Leon Counties, killing 1 person by lightning near Waco, leaving crop damage of $35,000, and property damage of $250,000, at least 375 windowpanes were broken in Buffalo. Lightning injured one person at Corsicana.

On the 22nd, hailstorms occurred at Breckenridge and Graham. Breckenridge had crop damage of $25,000 and property damage of $200,000 with 2 injured; Graham had property damage of $15,000. Suspected tornadoes with no damage occurred at Fort Phantom Hill Lake and Bradshaw (near Abilene).

Minor storms occurred at Sanger on the 27th, and near Tioga, Grayson and Cooke Counties, Vega, and in Reeves County on the 29th.

C. B. Crooker

FLOODS

Excessive rains, averaging 4.15 inches, fell over the Trinity River Basin below Long Lake from April 9 to 13. These rains caused a sharp rise in the Trinity at Riverside on the 9th and at Liberty on the 10th. Flooding occurred at Liberty from the 11th to 18th. Stockmen removed livestock from the lowlands in response to warnings issued by the Weather Bureau.

STATION INDEX

Station	Index No.	County	Drainage	Latitude	Longitude	Elevation	Observation time Temp.	Observation time Precip.	Observer	Rain-gage telem.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Additional information regarding the climate of Texas may be obtained by writing to any Weather Bureau Office or to the State Climatologist at Weather Bureau Office, Box 4089, Houston 14, Texas.

-	No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AM	Data based on observational day ending before noon.
AR	This entry in time of observation column in Station Index means after rains.
B	Adjusted to a full month.
C	Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

TEXAS

MAY 1955
Volume LX No. 5

ASHEVILLE: 1955

TEXAS - MAY 1955

WEATHER SUMMARY

May was hot. It was the warmest May since 1933 and a review of the records back to 1888 showed that there were only five Mays of record with temperatures averaging higher than 74.9°, the average for May 1955. Rainfall averaged 3.87 inches or 13% above normal. This is the highest average rainfall for any May since 1947 although rainfall for every May since that year has averaged over 3.00 inches. Timely rains brought moderate improvement to the summer ranges and pastures. They also saved some marginal fields of wheat and improved the prospects on surviving dryland acreage in the High Plains. Most cotton producing areas benefitted from the May rains, also.

Temperatures in the far west fluctuated within a few degrees of normal and averaged near normal. Mean daily temperatures for El Paso ranged from 7° below normal on the 26th to 8° above normal on the 14th, and averaged exactly normal. Daily mean temperatures over the Panhandle were above normal on most days. The outstanding exceptions were the 9th, 10th, 18th to 20th, 28th and 29th. In northeastern Texas, daily mean temperatures were near or a few degrees above normal except on the 20th, 29th, and 30th, when they were a few degrees below normal. Temperatures along the Gulf averaged near or a few degrees above normal except on the last few days. In general, the weather was mostly warm with no prolonged cool spells and no intensely hot spells. Mean monthly temperatures were above normal at practically all stations. The departures of the mean monthly temperatures from normal were less than 2° over most of the Panhandle, the extreme west, several counties in the Houston-Victoria area, and the vicinity of Lufkin, and, in general, exceeded 2° at most stations in the central part of the State Mean monthly temperatures ranged from 63.0° at Mount Locke to 84.7° at Rio Grande City. The highest temperature registered during the month was 112° at Rio Grande City on the 26th; the lowest, 37°, at Mount Locke on the 12th.

Light showers occurred somewhere in Texas on practically every day of the month. More generous shower occurred on about half of the days. In general, the most abundant rains fell on the 10th, 11th, 16th 18th, 19th, and 29th. The greatest 24-hour amount was 7.50 inches recorded at Morgan Mill on the morning of the 19th. The distribution of the rains over the State was very uneven. Monthly amounts over most of the Trans-Pecos were less than 2.00 inches and, in the extreme west, less than 1.00 inch. Most of the Lower Valley received less than 1.00 inch of rain during May. The exception in that area was Raymondville which recieved 5.14 inches on the 29th when a heavy thunderstorm dumped 4.90 inches during the forenoon and another thunderstorm in the afternoon left 0.24 inch. Several counties in northeast Texas, a large part of central Texas, and the eastern part of the Panhandle received over 4.00 inches of rain during the month. Numerous stations in central Texas, several near the Oklahoma boundary from Telephone to Vernon, and several in the eastern part of the Panhandle received over 6.00 inches. Valley View, with 12.32 inches during the month, had the greatest total. At the other extreme were the Cornudas Service Station and Murr Ranch with no rain during May.

Timely rains during May brought moderate improvement in wheat prospects. Much of the High Plains acreage had been lost prior to the rains. Some fields which were at the point of being abandoned, were improved to the extent that light to moderate yields were expected. The rains checked deterioration in the eastern Low Rolling Plains and Cross Timbers. Fair to good yields were being combined in those areas. Combining of Blackland oats was under way at the end of May. Much of the low-yielding oats had been cut for hay. The condition of corn was above average. Lack of rains reduced the sorghum yields in the Coastal Bend area but the crop made good growth in the Blackland and south central areas Moisture was favorable for cotton in most producing areas except the western part of the Coastal Bend and other non-irrrigated areas of South Texas. May weather was generally favorable for the summer cro of potatoes and it was estimated that the total production would be 80% more than last year and 29% more than the 1944-1953 average.

Summer ranges and pastures improved in response to the May rains. The rains were too light to improve pastures in the extreme south, the western Plateau, and Trans-Pecos counties. In those areas, the ranges were practically bare while on the east side of Texas sleek and fat cattle were grazing in tall grass. Ewes and lambs on the eastern and northern side of the Plateau were picking up on weeds and grass started by the rains. On the western side of the Plateau and over the Trans-Pecos, where only scattered showers fell, range feed was still short and supplemental feeding continued on most ranches.

Lucius W. Dye

STORMS

Numerous local storms occurred during the month in all parts of the State; however, only the major storms are included in this summary. On the 1st, wind damaged property amounting to $7,500 from Parnell to Shamrock and in Tulia. On the 6th, tornadoes, high wind, and hail left destruction in Central Texas from Waco to Taylor with major damage centered in Temple. These storms left total damage of $786,000 with 1 killed and 1 injured. On the 11th, a tornado and hailstorm left property damage of $350,000 from Cisco to Ranger, Eastland County, with scores of homes and business establishments damaged by hail and wind. On the 15th, hail and wind damaged property amounting to $12,500 and injured one person at Dryden. Also on the 15th, hail and lightning damaged property in Dallas and Tarrant Counties amounting to $85,000 and crop damage of $25,000.

On the 17th, hail destroyed crops amounting to $35,000 and property valued at $120,000 near Hale Center. On the 18th, near Palacios, a tornado and hailstorm damaged 1,000 to 1,500 acres of cotton, and property valued at $3,500. Also on the 18th, another tornado and hailstorm at Moulton and Hallettsville destroyed $20,000 worth of crops and $30,000 worth of property. On the 19th, in Fort Worth wind blew over a 10-ton repair dock at Carswell Air Force Base with damage amounting to $20,000. Also on the 19th, in Baylor and Knox Counties hail damage was estimated at $20,000 near Bomarton. A tornado at Hallettsville damaged property valued at $35,000 on the 19th. Also on the 19th, at Kingsville lightning struck on a high school campus among a group of boys, killing four and injuring two.

WEATHER SUMMARY (Continued)

the 22nd, near Abernathy and Big Spring, crop damage was in excess of $30,000 and property loss $1,000 from tornadoes accompanied with hail. On the 25th, three tornadoes occurred: (1) at Rotan, mage $1,200; (2) Knox City, crop damage from hail $2,000 and $5,000 property loss; and (3) near amrock, first sighted 10 miles north of Wellington, touching ground in open field, moving northeast-rd and entering Oklahoma about 15 miles east of Wheeler; 5 persons were injured in this storm.

the 26th, hail completely destroyed vetch and oat crops near Tennessee Colony, Anderson County, lued at $25,000; at Frankston, Anderson County, hail damaged the tomato crop and home gardens valued $10,000. A tornado at Wichita Falls demolished property amounting to $25,000. In Vernon, wind d hail caused crop damage of $2,100 and property loss of $300.

the 30th, in Amarillo, wind and hail demolished property valued at $3,500; at Wink a tornado col-psed buildings and damaged 25 homes amounting to loss of $50,000.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Additional information regarding the climate of Texas may be obtained by writing to any Weather Bureau Office or to the State Climatologist at Weather Bureau Office, Box 4089, Houston 14, Texas.

-	No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AM	Data based on observational day ending before noon.
AR	This entry in time of observation column in Station Index means after rains.
B	Adjusted to a full month.
C	Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

TEXAS

JUL 1955

JUNE 1955
Volume LX No. 6

ASHEVILLE: 1955

TEXAS - JUNE 1955

WEATHER SUMMARY

Temperatures averaged slightly below normal. Scant rainfall over a group of counties south and southwest of Lubbock delayed and prevented planting full intended acreages of cotton and sorghums. Farmers in the eastern High Plains and the northern Low Rolling Plains had unusual trouble getting crops started as the result of washing rains and hail. A large part of the State was beginning to need rain by the end of June and south Texas and the southern High Plains continued extremely dry.

Temperatures over Texas averaged within a few degrees of normal on most days. The principal exception was the period from the 9th to 12th when daily mean temperatures at several stations were considerable below normal. The daily mean temperatures at Amarillo and Lubbock were 19° below normal on the 9th. Most stations registered their lowest temperatures on the 10th or 11th. In general, monthly minimum temperatures ranged from the low 40's over the northern Panhandle to the upper 60's over the Lower Valley. The lowest temperature for the State was 36° at Mount Locke on the 10th. In general, the highest temperatures occurred on the 8th or during the last week of the month. Monthly maximums were, in general, in the upper 90's over the eastern part of Texas but well over 100° over the western part. The highest temperature for the State was 113° registered at Presidio on the 8th, 25th, and 26th. Monthly mean temperatures ranged from 69.8° at Mount Locke to 86.8° at Laredo. The average for the State was 78.5° or 1.1° below normal.

Precipitation was very unevenly distributed over the State. Many stations in the western Panhandle, the Trans-Pecos, and in southern Texas received less than 1.00 inch of rain during the month. Some counties in northeastern Texas received less than 2.00 inches. Most stations in central Texas received from 2.00 to 4.00 inches. Many counties in the north central part of the State received more than 4.00 inches and a few stations in the extreme north central reported more than 6.00 inches. The greatest monthly total was 11.89 inches at Memphis. Six stations received no rain during the entire month. Several stations reported small amounts of hail. Although a few stations received no rain during the month, numerous stations received daily falls of 2.00 inches or more. Daily amounts exceeding 3.00 inches were reported on the 4th, 5th, 6th, 15th, 19th, and 28th. The greatest daily amount was 4.70 inches recorded at Jarrell on the morning of the 6th.

Field work continued active over the south central, coastal, eastern, and southern High Plains counties with the emphasis shifting from planting to cultivating or harvesting as the season developed. Frequent rains held field work at a standstill in the Low Rolling Plains, Cross Timbers, and Blacklands. Considerable replanting of sorghums and cotton was necessary, particularly in the Low Rolling Plains, because of the hail and washing rains. At the end of the month, sorghum planting and replanting continued in most of the northwest. Dry soils restricted plantings in some non-irrigated areas of the southern High Plains. Late feed crops in central, northern, and eastern districts need moisture to maintain current favorable prospects. Cotton picking was increasing in the Lower Valley. Harvest of South Texas spring vegetables was practically complete and the growers were busy preparing for fall-crop vegetables. Range and pasture feed was generally abundant over the eastern half of the State but moisture was getting short and new growth was slowing down or had stopped.

Lucius W. Dye

STORMS

Storms took a toll of eight lives, injured 13, left crop damage exceeding $2,800,000, and wrecked property exceeding $5,600,000 during June. Only major storms are summarized here, since more than 100 storms were reported of varying magnitude. The most destructive single storm was a hailstorm at Amarillo on the 19th, which was the heaviest hailstorm in the history of Amarillo. More than $2,000,000 dollars damage was inflicted on approximately 6,000 dwellings and 1,500 automobiles. Three other storms were of outstanding magnitude; (1) a hail and windstorm at Eastland on the 15th damaged roofs, windows, and crops. Hailstones were as large as baseballs. Property damage amounted to $500,000 and crop loss was $100,000; (2) a tornado, wind and hailstorm at Winters on the 16th damaged windows and roofs of churches, hospitals, and public schools. Property loss, $500,000 and crop loss, $100,000; and (3) a tornado and hailstorm at Spur on the 3rd smashed practically every window with west exposure, with 300 windowpanes broken in the Junior High School alone. Property loss, $500,000 and crop loss, $50,000.

From the 2nd to the 5th, tornadoes, hail, wind, and lightning left extensive damage to crops and property at Lubbock, Spur, Brady, Emory, Jarrell, Rockdale, Encinal, Eagle Lake, and Egypt. On the 8th, storms ranged from Shamrock to San Angelo and from Wichita Falls to Waco. Damage was heavy at Crosbyton and Midland. Lightning killed two farmers, one near Hale Center, the other near Lamesa. Storms were also reported from Fort Worth, Dallas, Ranger, Nocona, Seagraves, Groesbeck, Mineral Wells and Ft. Stockton. On the 9th, lightning struck three persons in Port Arthur, killing one, and injuring two. On the 10th, Eastland reported hail as large as baseballs with heavy damage to plate glass windows. On the 14th, storms ranged from Dimmit and Lubbock southeastward to Brownwood. Damage from hail was heavy at Rotan. On the 15th, storms were extensive in North-Central Texas. In addition to the Eastland storm, severe storms occurred at Gladewater, Graham, Caddo to Breckenridge, Gorman, Desdemona, DeLeon, Follett, and Gilchrist (Galveston Co.) On the 16th, besides the Winters storm, others occurred at Spanish Fort (Montague Co.), Panhandle to Ashtola, Nolan to Ballinger, Higgins, and Junction. On the 17th, property damage at Wellington amounted to $500,000 from a wind and hailstorm. On the 18th, hail damage was extensive from Kress to Crosbyton. Other storms occurred at Mineral Wells, Cleburne, Glen Rose, and in Childress and Rockwall Counties.

On the 19th, in addition to the Amarillo hailstorm, destructive storms occurred at Clarendon, Lakeview, Memphis, Childress, Quanah, Stinnett, Longview, and Archer City. At Quanah, three children were drowned in a storm cellar when their father opened the door after the passage of the storm. Two men were injured by lightning in Archer City. On the 20th and 22nd, wind and hail left extensive damage in Van Zandt and Henderson Counties. On the 27th, lightning killed two men, one near Panhandle, the other near Canadian.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Additional information regarding the climate of Texas may be obtained by writing to any Weather Bureau Office or to the State Climatologist at Weather Bureau Office, Box 4089, Houston 14, Texas.

-	No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AM	Data based on observational day ending before noon.
AR	This entry in time of observation column in Station Index means after rains.
B	Adjusted to a full month.
C	Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

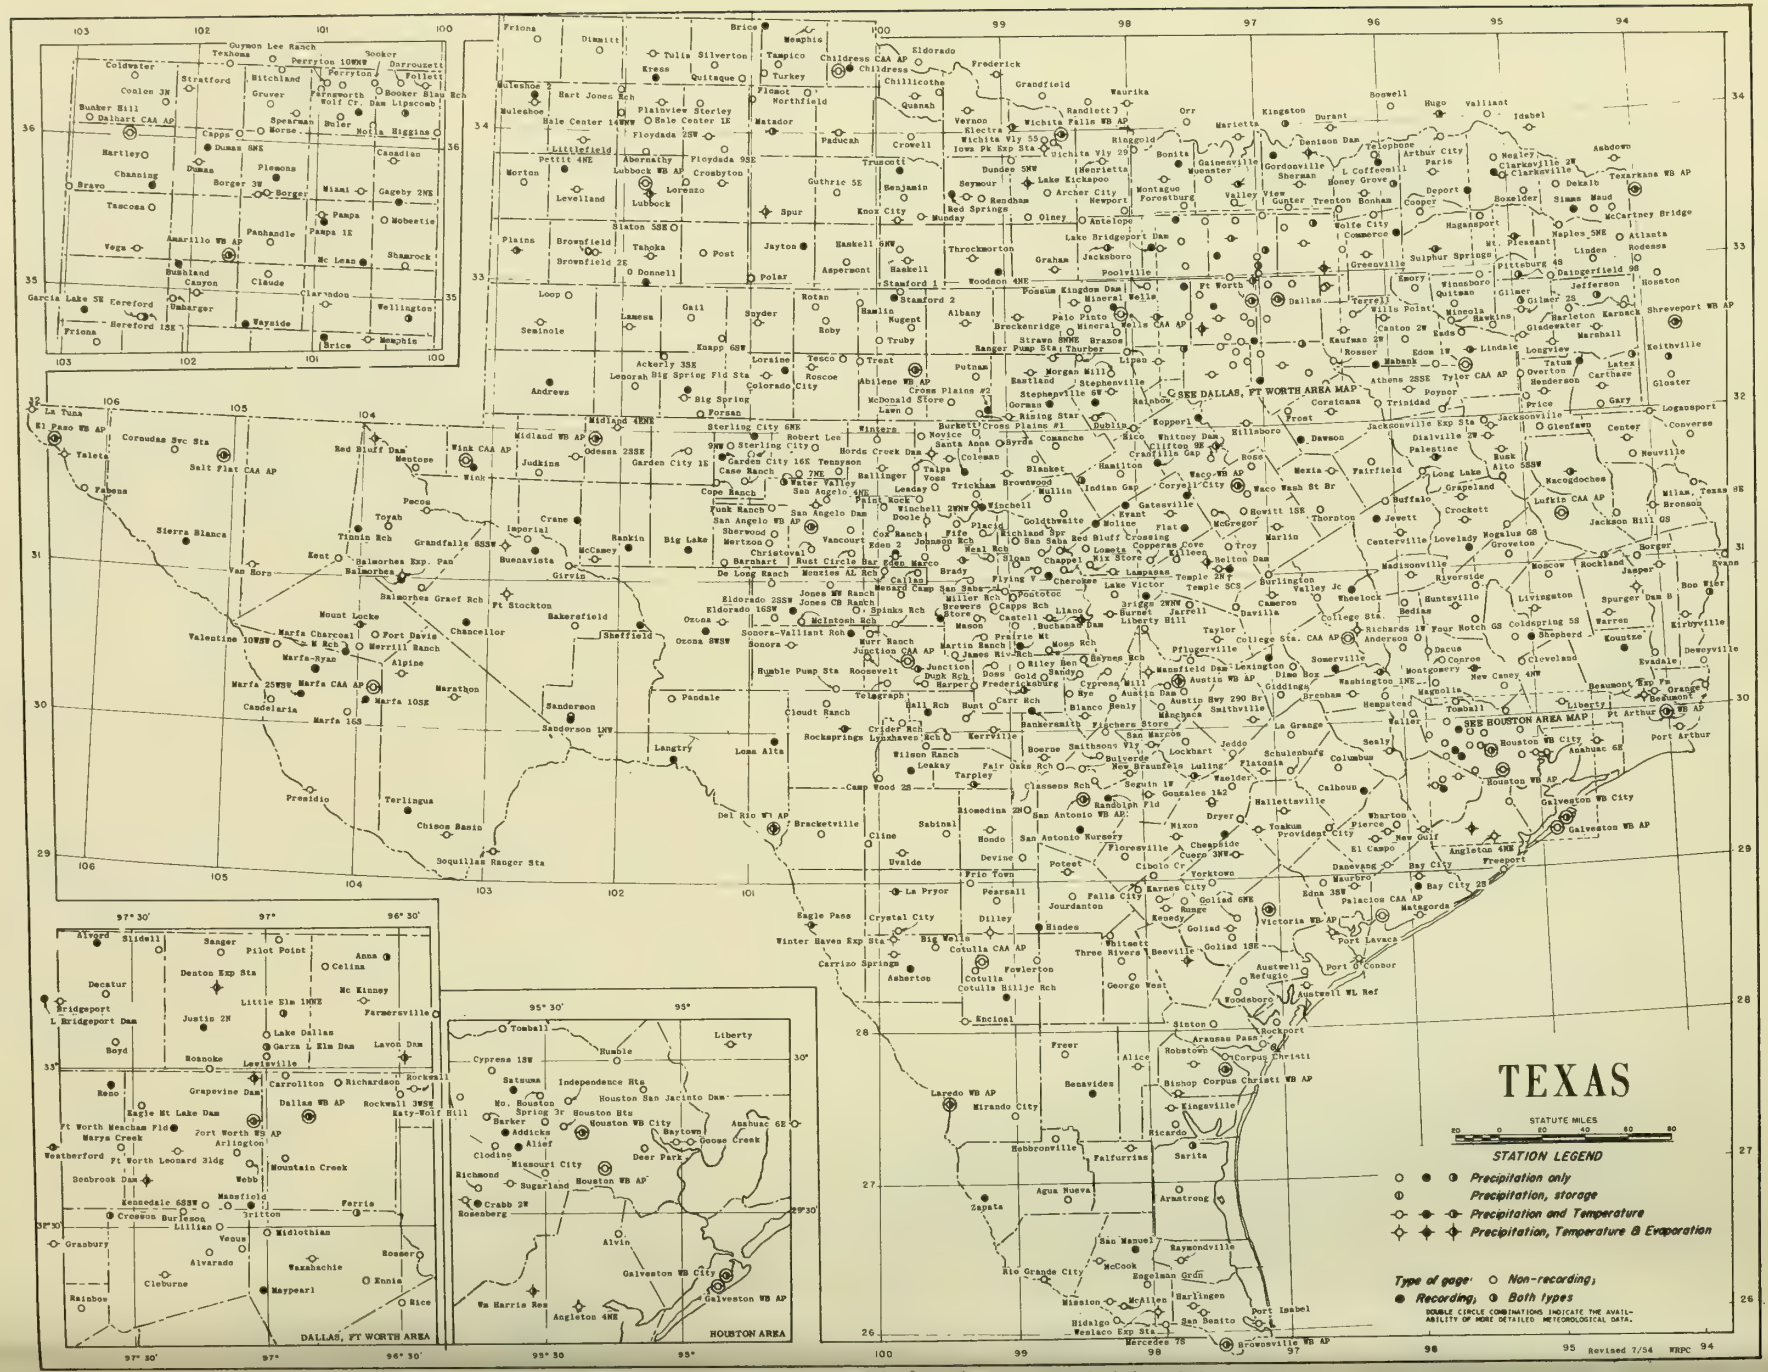
Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

NWRC, Ashville, N. C. -- 8-24-55 -- 1655

CORRECTIONS

January 1954: Balmorhea Experiment Pan, Table 2, precipitation departure should be -0.28.

January 1955: Decatur, Table 3, precipitation on the 15th should be 0.28 and total 1.42.



February 1955: Lamesa, Table 2, days with minimum temperatures 32 or below should be 24.

Stratford, Table 2, days with minimum temperatures 32 or below should be missing.

March 1955: Vernon, Table 2, greatest day should be 0.94.

Port Lavaca, Table 2, mean maximum should be 73.0M, mean minimum 55.7M, mean, 64.4M, departure +0.3 and degree days 151.

Port Lavaca, Table 5, maximum on the 1st should be 79 and mean maximum 73.0. Minimum on the 1st should be 66 and mean minimum 55.7.

CLIMATOLOGICAL DATA

TEXAS

JULY 1955
Volume LX No. 7

ASHEVILLE: 1955

TEXAS - JULY 1955

WEATHER SUMMARY

Temperatures averaged 82.4 degrees or exactly normal for July. Rainfall averaged 2.51 inches or 0.01 inch above normal. No unusually high nor low temperatures were registered but some stations continued in drought while others received more rain than in any July of record. Production prospects for feed crops, hay, rice, and sweet potatoes improved during the month.

In general, temperatures averaged slightly above normal during the first half of the month and slightly below normal during the last half. The daily mean temperatures were very near normal over the east with greater departures over western Texas and the Panhandle. Most stations registered their highest temperatures during the first half of July. Maximums ranged from the 90's along the Gulf and at the high elevation stations in the Panhandle and in western Texas to several degrees above 100 at most other stations. The highest temperature was 108 degrees at Presidio on the 8th. Monthly minimum temperatures ranged from 51 degrees at Mount Locke to 75 degrees at Corpus Christi. The minimums for most stations were in the 60 degrees. Temperatures averaged near normal at practically all stations and the temperatures for each division of the State averaged near normal.

Showers fell somewhere in Texas on every day of July. Showers were locally heavy on the 2nd to 4th, 9th, 13th to 23rd, and 27th to 29th. Daily totals of several inches were reported at some stations during the rainy period, 13th to 20th. Although generous rains occurred over some localities, nearby places received monthly totals which were considerably less than normal. The irregularity of the precipitation over the State is well illustrated by a few examples. Rainfall at Brownsville exceeded the July normal by 81%. Precipitation at Brownsville was below normal for each of the previous eight months. Serious drought conditions continued at Corpus Christi where the July rainfall amounted to only 42% of normal. El Paso received more rain than in any July since 1914. The many stations with above-normal amounts were so scattered among the stations with below-normal totals that the averages for all divisions of the State were not far from normal and the average for the entire State was only 0.01 inch above normal.

Moderate temperatures favored development of crops. Above-normal rains in the High Plains, northern Low Rolling Plains, and much of north Texas were spread over the last three weeks of the month and kept cotton and feed crops coming along. A strip down through the southern Blacklands and into south central counties was dry. Early feeds in that area matured fair to very good crops on early-season moisture but by the end of the month cotton was suffering. South Texas was extremely dry throughout the growing season and very short dryland cotton and feed crops were produced. Except for being late, prospects throughout the important northwest were promising. Timely July showers kept the crop in upper coastal, eastern, and northern counties coming along rapidly. By July 31 cotton picking had passed the half-way mark in the Lower Valley and Coastal Bend, was active in other south Texas areas, and was getting underway in southern Blackland counties. Wheat harvest in the High Plains was completed about mid-July. By the end of July most of the Plains wheat land had been turned and the month's rains were beginning to germinate the volunteer crop. Timely July rains favored development of late corn. A light harvest was underway in south and south central counties. Harvest of a bumper crop of sorghum grain extended into north Texas and the Low Rolling Plains. High yields were realized in central counties and the north Texas crop was very promising. Harvest of the south Texas peanut crop was active with only fair dryland yields being realized. The crops in other areas, especially the Cross Timbers, continued to make good progress. Summer range and pasture grass over the Plains made good recovery during July's three weeks of showery weather. July showers also greened up ranges over the Plateau and Trans-Pecos. Grass was still short, however, in much of those areas and follow-up showers were needed to maintain development. Ample grass was available over most Blackland, Eastern, and Upper Coastal counties but much of South Texas needed soaking rains to revive grass. Except in South Texas, where most feed crops burned up in the spring drought, prospective hay, roughage and grain supplies were unusually good. A large crop was already baled and near record-high sorghum yields were shaping up on a greatly expanded acreage. Additional showers, however, were still needed to make the High Plains crop. Cows and calves were generally in good flesh. Ewes and lambs were picking up on the improved green feed over much of the main sheep country, but August rains will be needed to keep grass coming along.

Lucius W. Dye

STORMS

Storms took a toll of four lives, injured 15, left crop damage exceeding $328,000, and wrecked property exceeding $56,900 during July. Lightning caused all the deaths and 11 of the injuries. Property damage due to lightning amounted to $14,500. Losses due to lightning were reported from the following places on the dates mentioned: Conroe, 3rd; Nacogdoches, 11th; San Antonio, 12th; Kilgore, 15th; Alemda, 25th; near Sudan, 26th; and near Monahans, 26th. Windstorms injured four persons and caused property loss amounting to $37,400 at the following places: Emory, 11th; Houston, 11th; Fort Hood, 14th; Waco, 14th; Valley Mills, 15th; Hico, 15th; Fort Worth, 15th; and Greenville, 17th. Hail damage was confined to the western part of the State on the 26th, 27th, and 28th with crop losses exceeding $328,000 and other property losses about $5,000. Hail was reported from the following places: Earth, Olton, Wilson, Post, and near El Paso. Six tornadoes were reported but only one reached the ground. Those not reaching the ground were reported near Beaumont and Lamesa on the 18th; near Anahuac on the 23rd; near El Campo on the 28th; and near Anahuac on the 29th. One touched the ground near Vernon on the 28th and partly destroyed a storage shed. Three waterspouts were reported near Galveston on the 1st, 19th, and 29th. One dust devil was reported near San Angelo on the 4th.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Additional information regarding the climate of Texas may be obtained by writing to any Weather Bureau Office or to the State Climatologist at Weather Bureau Office, Box 4089, Houston 14, Texas.

-	No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AM	Data based on observational day ending before noon.
AR	This entry in time of observation column in Station Index means after rains.
B	Adjusted to a full month.
C	Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

AUGUST 1955
Volume LX No. 8

ASHEVILLE: 1955

TEXAS - AUGUST 1955

WEATHER SUMMARY

Temperatures averaged near normal for the month. Rainfall averaged 14% more than normal for the State as a whole but was not distributed to fit the crop needs. Generous rains over eastern and southeastern counties hampered the harvest of corn, cotton, hay, and rice, which was in full swing, but were scanty over much of the west and northwest where they were urgently needed.

Temperatures were very near normal during the first decade, slightly below normal during the next ten days, and averaged slightly above normal during the last decade except the last two days which were relatively cool. Temperatures for the State as a whole averaged 81.9° or 0.3° less than norma Temperatures over the extreme south, the extreme west, parts of the north central, and over the western Panhandle averaged slightly above normal. Elsewhere, temperatures averaged slightly below normal. Monthly mean temperatures ranged from 67.0° at Mount Locke to 88.0° at Laredo Weather Bure Airport. The highest temperature recorded during August was 112° at Albany and Seymour on the 9th. The lowest temperature was 49° at Mount Locke on the 20th.

Substantial rains occurred somewhere in Texas during four periods. The northeast received heavy local showers from the 2d to 5th. From the 11th to 15th, a number of localities in eastern and southern Texas received generous showers and isolated showers occurred elsewhere. Rains occurred over most of Texas except the Panhandle from the 18th to 21st. These showers were heaviest and mos frequent over the central and southeastern counties. During the last four days of the month east Texas and the upper coast received rains and west Texas received almost no rain. South Texas received some showers on the last two days of the month. Monthly totals exceeded 4.00 inches over much of east Texas but were less than 2.00 inches at stations elsewhere in the State. Anahuac 6 E received the greatest monthly total, 17.22 inches. Four stations--Agua Nueva, Gail, Robert Lee, ar Roby--received no rain during the month and several stations received sprinkles too light to measur Most stations in east Texas and most stations within a few hundred miles of the coast received more than their August normal amounts of rain. Most stations elsewhere received less than normal amount

Crop prospects declined during August in the dryland areas of the west and northwest where scanty rains fell and where the dryland cotton and sorghum crops urgently needed more moisture. Almost all the wheat land of the northwest was prepared for seeding. A few growers had started seeding but most farmers were waiting for the rains to come first. In eastern and southeastern Texas, heav rains slowed the harvest of corn, cotton, hay, and rice. Cotton prospects declined in the central and northern Blacklands due to insect infestation. Prospects also declined in the dryland acreage of the northwest where rains were needed badly to prevent further deterioration and to prevent premature opening. Irrigated cotton in the High Plains and the Trans-Pecos made good development and yields in southeastern and south-central counties were exceeding expectations. By the end of Augus corn harvest had begun as far north as the Red River. Yields were the highest since 1908 in that area. Yields were high over the main corn growing areas but had been reduced by drought throughout the growing season in the minor corn areas of south Texas. Hot dry weather reduced sorghum heading and filling in the dryland areas of the northwest. Irrigated sorghums in the High Plains continued in good condition and the harvest of sorghum was active in the southern High Plains and the Low Rolling Plains where yields were fair to good. Harvest was about complete in the Blacklands where yields were excellent. Production was sharply reduced in the dryland areas of south Texas includi the important Coastal Bend. Peanut prospects remained unchanged. Timely August rains favored continued growth of the hays native to central, eastern, and southeastern counties and a record crop seemed assured. A large crop of sweet potatoes of excellent quality was being harvested. Pecan prospects remained unchanged during the month. The best yields were expected in eastern, south central, and upper coast areas. The light to heavy rains over south Texas on the last two days of August were expected to revive the pastures and ranges in that area. Range and pasture grass made rank growth in the southeast and along the Upper Coast. Ranges were dry and cured grass was getti scarce in the west and northwest and supplemental feeding increased. In the Plains country, cattl were being turned into some sorghum fields that would not produce grain to salvage the available roughage.

Lucius W. Dye

STORMS

Severe storms cost the lives of 6 persons, injured 6, left crop damage exceeding $43,000, and wrec property exceeding $36,000 during the month. Lightning killed 4, injured 1, and left property dam of $3,000. Losses from lightning were reported from the following on the dates indicated: Bay Ci 10th; Palmer (Ellis County) on 11th and 18th; Nederland (Jefferson County), 12th; San Antonio, 13t Willow City (Gillespie County), 17th; Amarillo, 22nd; and Jonesboro (Hamilton County), 29th. Wind storms killed 2, injured 1, and caused property damage of $25,500 at the following: Sherman, 1st; Gonzales, 3rd; Abilene, 4th; Breckenridge, 4th; Cross Cut (Brown County), 8th; and Gatesville, 9th Hail damage was scattered leaving damage to crops of $43,000 and property loss at $5,500 at the fo lowing: Dell City (El Paso County), 1st; Lorenzo (Crosby County), 5th; Fabens (El Paso County), 7 Melvin (McCulloch County), 18th; and in San Antonio on the 18th. Tornadoes injured 4 and caused property loss of $2,300 at the following: Whitt (Parker County), 8th; Edson (Hamilton County), 29 and Hungerford (Wharton County) on the 30th. Suspected tornadoes were reported from Mitchell Coun on the 12th; from Coke County on the 18th; and over Lake Sabine on the 30th. Funnel clouds, not reaching the surface, were reported near Big Spring, 2nd; Palacios, 14th and 15th; Corpus Christi, 15th; near Port Arthur, 29th; and over Almeda (Harris County) on the 31st. Waterspouts were repor near Galveston, Corpus Christi, and Palacios on the 11th and 31st.

C. B. Crooker

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Additional information regarding the climate of Texas may be obtained by writing to any Weather Bureau Office or to the State Climatologist at Weather Bureau Office, Box 4089, Houston 14, Texas.

-	No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AM	Data based on observational day ending before noon.
AR	This entry in time of observation column in Station Index means after rains.
B	Adjusted to a full month.
C	Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

TEXAS

SEPTEMBER 1955
Volume LX No. 9

NOV 21 1955

ASHEVILLE: 1955

TEXAS - SEPTEMBER 1955

WEATHER SUMMARY

Temperatures during September averaged slightly above normal at almost all stations. Generous rains occurred over the Coastal Bend and southward to Brownsville, over the Cross Timbers and the northern Blacklands, and in some parts of the Low Rolling Plains. Little rain fell in some counties of the Trans-Pecos. The average for the State was 2.95 inches or slightly more than normal. September rains gave ranges and pastures a big boost but interrupted the harvest of mature crops along the coast. They furnished most areas with adequate moisture for seeding small grains and winter cover crops.

Temperatures over the Panhandle averaged near normal during the first two weeks. A warm period persisted from the 13th to 22nd. The 23rd to 26th were quite cool. The 28th and 29th were mild, and temperatures on the 30th were normal. Daily mean temperatures over other parts of Texas averaged slightly below 80 degrees with no extended periods of extremely hot or cold weather. The warmest temperature registered during the month was 105 degrees at Presidio on the 10th; the coolest was 42 degrees at Miami on the 26th. Monthly mean temperatures ranged from 65.1 degrees at Mount Locke to 83.4 degrees at Laredo.

Scattered thundershowers occurred over many sections of the State during the first week. The heaviest showers fell over the eastern and southern sections. Soaking flooding rains persisted during the second week along the coast from Corpus Christi to Brownsville. Some other parts of Texas received light local showers. Southern Texas also received light local showers during the third week of September. General heavy rains occurred over northwestern and north central Texas on the 23rd to 25th. Twenty-four amounts exceeding 7.00 inches were recorded at one or more stations on the 6th, 7th, 8th, 23rd, 24th, and 25th. The greatest 24-hour amounts were 10.45 inches recorded at Aransas Pass on the 6th and 9.00 inches at Polar on the 25th. (See "Floods" below.) The greatest monthly total was 15.90 inches at Raymondville. At the other extreme, Thornton received no rain during September and Fair Oaks Ranch received only a few sprinkles. In general, the Coastal Bend, the extreme northeast portion, the northern Blacklands, Cross Timbers, and the eastern edge of the Low Rolling Plains received more than the September normal amounts but most stations elsewhere received less than their September normals.

Torrential rains from the 6th to 8th stopped the harvest along the coast. Outside the rain-drenched belt northward to the Red River and westward into the Low Rolling Plains corn, cotton, sorghum, and hay harvests continued in open weather. The rains on the 23rd to 26th improved the soil moisture conditions but interrupted the harvest over most of the northwest Plains country, the Cross Timbers, and parts of north and east Texas. These rains gave a big boost to small grain and winter cover crop prospects. The wheat drills started rolling on the High Plains as fast as the muddy fields dried and by the end of the month, much of the intended acreage had been planted. Wet fields continued to delay small grain planting and cotton harvest in the Low Rolling Plains and eastward. The harvest of cotton, corn, and peanuts and the planting of small grains and winter legumes moved along in the east and southeast as fast as the fields dried. The heavy rains improved the pastures and ranges over the west and northwest, over the Low Rolling Plains, Cross Timbers, some northern Plateau and High Plains counties, and in south Texas areas. Livestock were making good gains on the improved supply of green feed. More rains were still urgently needed in some south central counties from about Austin to Del Rio. The non-irrigated vegetable areas of south Texas, which had been dry most of the year, were thoroughly soaked by the September rains. In general, September rains over some areas delayed field work but benefited growing crops. In sharp contrast, other areas were in urgent need of rain.

Lucius W. Dye

STORMS

Severe storms killed one person, injured 20, left crop damage of about $80,000, and wrecked property amounting to about $100,000 during the month. Lightning killed one person and injured three others at Hillsboro on the 10th, left $3,000 damage also on the 10th at Lubbock, caused $2,000 damage at Orange on the 14th, and another caused $2,000 damage at Kilgore on the 22nd. A windstorm on the 10th at Fort Worth damaged three airplanes at Meacham Field, tossed boaters on Lake Worth into the water, broke windows, toppled scaffolding and blew over trees. The damage amounted to several thousand dollars. At Anson (Jones County) wind damaged the screen of a drive-in theater, amounting to $6,000 on the 10th. On the 20th at Amarillo wind accompanied by hail and lightning caused damage amounting to $50,000 mostly to equipment at the Tri-State Fair grounds. Sixteen persons were injured during this storm. On the 30th in Fort Worth wind blew down trees, broke windows, and demolished signs near Richland Hills. The damage amounted to $600. Hail damaged crops in Knox County near Gilliland and Vera on the 3rd to the amount of $70,000 with property damage amounting to $5,000. On the 10th at Afton (Dickens County) hail damaged crops to the amount of $10,000 and property to the amount of $1,500. A tornado at Olney on the 25th demolished four business buildings and damaged several other structures. Property damage was estimated at $25,000. Tornado funnels, not touching the ground, were reported at the following places on the dates indicated: 16 miles north of Corpus Christi on the 13th, near Katy (Harris County) on the 14th; near the Houston Airport on the 15th; near Victoria on the 18th; and near Dimmit on the 25th. A suspected tornado which destroyed a garage and moved two houses was reported near Edinburg (Hidalgo County) on the 20th. A water spout was observed near Corpus Christi on the 18th.

C. B. Crooker

FLOODS

Hurricane Gladys and subsequent squalls brought heavy rains to the Gulf drainage portion of the Corpus Christi River District on September 6 and 7 causing flooding along the creeks of the area. Flood warnings were issued for the Alice, Falfurrias, and Kingsville areas. Flooding did not reach the critical point at those places and most of the damage was confined to streets, highways, and crops.

Heavy rains on September 24 made necessary the evacuation of about 30 families from Wichita Falls on the 25th.

A very local 7.45-inch rain at Clarksville in about three hours on the 24th caused severe flooding. Three small creeks overflowed their banks and storm sewers were unable to carry off the accumulation of water. The water inundated about 50 blocks of residential and business property and caused evacuation of about 200 persons from their homes. Many automobiles were damaged, one bridge was dislodged from its foundation, four other bridges were badly damaged, and telephone service was temporarily disrupted.

AVERAGES FOR THE PERIOD 1914 TO DATE HAVE BEEN WEIGHTED ACCORDING TO AREA AND ARE NOT COMPARABLE WITH UNWEIGHTED VALUES PUBLISHED IN THIS TABLE FOR EARLIER YEARS.

WEATHER SUMMARY (Continued)

Heavy rains on the morning of the 24th caused flash flooding on the uppermost portion of the Nueces River. Unofficial reports of 22 inches and 24.60 inches of rain came from near Hackberry. Local people said it was the worst flood they could remember in that area. Damage was largely to livestock, crops, outbuildings, and highways. Damage to private dwellings was small and no fatalities or personal injuries were reported.

Excessive rains which fell over the upper Brazos River watershed during the 24-hour period ending at 7:00 a.m. September 25 caused considerable flooding in the Breckenridge, Graham and Olney areas. Minor flooding occurred immediately below the Possum Kingdom Reservoir.

Lucius W. Dye

See reference notes following Station Index.
